Education

Hong Kong University of Science and Technology (Guangzhou), Ph.D. in Fintech — Sep 2026 – Present
Dongbei University of Finance and Economics, Bachelor in Economic Statistics — Sep 2022 – Jun 2026

A Brief Introduction

I am a **Ph.D. student** in Fintech at the **Hong Kong University of Science and Technology (Guangzhou)**, supervised by Prof. Guang Zhang. I received my B.S. in Economic Statistics from Dongbei University of Finance and Economics (DUFE), where I was supervised by Prof. Zhuang Liu and Prof. Qiang Xu. My research focuses on **LLM capabilities**, spanning **LLM evaluation**, **LLM post-training**, and **generative agents**. I have published papers at venues including **ACL 2026**, **EMNLP 2026**, **KDD 2025**, and **Annals of Operations Research**, with additional manuscripts under review at **WWW 2027**, **AAAI 2027**, **ACL 2027**, and **Management Science**. I also serve as a reviewer for leading venues such as **ACL**, **KDD**, **NeurIPS**, **AAAI**, and **IJOC**.

Research Publications[1]

LLM Evaluation

This line evaluates and interprets large language models beyond traditional benchmarks, asking where in generation factuality and reasoning fail, why they fail, and how those insights can guide the next training step. PRISM probes hallucinations across memory, instruction, and reasoning. BizCompass measures whether disciplinary knowledge becomes performance in a business role. Caught in the Story observes failures in multi-turn conversation and attributes them to a specific stage of post-training. MIND benchmarks long-form value measurement across public events and value dimensions. The graph question-answering benchmark extends this evaluation to open-set questions over text attribute time graphs.

LLM Post-Training

Post-training here centers on adaptation of language models—making them precisely steerable, and more capable without making them less reliable. Supervision in this setting is always imperfect; preference and reward signals shape behavior, and self-improving post-training is how that steering is kept. COR^2 shapes the reward around the structure of an optimization model rather than its outcome. PackRank makes concise reasoning the default by selecting short, accurate traces from packed queries for self-training. BizSage turns self-improvement toward automated business research. Don't Guess the User keeps ambiguity explicit through set-valued semantics and value-of-information clarification, while Vis-MCTS uses LLM-guided search for training-free algorithm discovery.

Generative Agents

The work studies how LLM-based agents perceive, reason, interact, and adapt in multi-agent environments, and how such simulations can be tested against how people perceive, decide, and act. SEDM aligns how agents make decisions in social interaction, rather than the surface answer. CasT^2 simulates collective behavior from the content that starts it. DND combines node-level LLM agents with graph-based action selection for fair resource allocation in large-scale dynamic networks. Headwater diagnoses who failed, by which pathology, and from which round. Where Conditions Get Lost tests whether generated social networks preserve conditional structure across people and contexts. The affective attachment framework models how memory, empathy, and accumulated affect shape loyalty and switching behavior in academic hierarchies.

Research Experience

Fintech Thrust, HKUST(GZ), Research Assistant, Supervised by Prof. Guang Zhang — Jun 2025 – Aug 2026

National Accounting Center, DUFE, Group Core Member, Supervised by Prof. Qiang Xu — Jan 2025 – Jul 2026

Fintech Lab, DUFE, Group Leader, Supervised by Prof. Zhuang Liu — Mar 2024 – Jul 2026

Honors & Awards

- ACL 2026 Diversity & Inclusion Grant (**TOP 1%**) — 2026
- KDD-25 Undergraduate Scholarship (**TOP 1%**) — 2025
- Dashang Group Academic Research Scholarship (**TOP 1%**) — 2025
- Excellent Innovation and Entrepreneurship Team Scholarship (**TOP 1%**) — 2025
- First-Class Scholarship (**TOP 2%**) — 2023 & 2024
- Core Member, Liaoning Marine Economy Study (5th National Economic Census Project) — 2024
- Core Member, Text–Price Correlation in Food Industry (Liaoning Edu. Dept. Innovation Grant) — 2024

Skills

Machine Learning: LLM evaluation and post-training, including supervised fine-tuning, RLHF, and preference optimization; generative models and agent frameworks; hands-on experience with DeepSeek-R1, Qwen, and Llama.

Statistical Analysis: Statistical analysis and modeling with SPSS, Stata, SAS, and R.

Research Tools: LaTeX, Linux, Conda, Git, Origin, and Visio.
